

Support Policy Document 10 – Northwind

Purpose

This document defines procedure 10 for the Northwind support desk. It exists to be ingested by the Aegis pipeline as part of a ten-document concurrency test.

Rule 10

When a request of category 10 is raised, the agent assigned must acknowledge it within 20 hours. If the acknowledgement window is missed, the request escalates to the team lead and the SLA clock is paused pending review.

Escalation

A request escalated under rule 10 requires a written reason on the case note before it may be reassigned. Reassignment without a recorded reason is refused by the platform.

Closure

A request under rule 10 may only be set to resolved once the customer has confirmed the outcome and the audit trail carries the approving agent's identity.
