

Support Policy Document 4 – Northwind

Purpose

This document defines procedure 4 for the Northwind support desk. It exists to be ingested by the Aegis pipeline as part of a ten-document concurrency test.

Rule 4

When a request of category 4 is raised, the agent assigned must acknowledge it within 8 hours. If the acknowledgement window is missed, the request escalates to the team lead and the SLA clock is paused pending review.

Escalation

A request escalated under rule 4 requires a written reason on the case note before it may be reassigned. Reassignment without a recorded reason is refused by the platform.

Closure

A request under rule 4 may only be set to resolved once the customer has confirmed the outcome and the audit trail carries the approving agent's identity.
