

Support Policy Document 8 – Northwind

Purpose

This document defines procedure 8 for the Northwind support desk. It exists to be ingested by the Aegis pipeline as part of a ten-document concurrency test.

Rule 8

When a request of category 8 is raised, the agent assigned must acknowledge it within 16 hours. If the acknowledgement window is missed, the request escalates to the team lead and the SLA clock is paused pending review.

Escalation

A request escalated under rule 8 requires a written reason on the case note before it may be reassigned. Reassignment without a recorded reason is refused by the platform.

Closure

A request under rule 8 may only be set to resolved once the customer has confirmed the outcome and the audit trail carries the approving agent's identity.
